

HOD introduces next-generation FibroScan for liver testing

Highlights

- ❖ Revolutionising liver health assessment and setting a new standard in non-invasive diagnostics
- ❖ This next-generation method only takes 5-10 minutes to complete

January 18, 2024, Delhi: House of Diagnostics (HOD), a renowned name in the field of diagnostics and pathology, has introduced FibroScan, a non-invasive diagnostic device to quickly and painlessly evaluate liver health. The device measures the stiffness (hardness) and fatty changes in the liver by capturing and calculating the speed of a shear wave as it travels through the liver. The stiffness in the liver can help in the clinical management of a liver disease. The new scanning service is now available at HOD Karkardooma centre in Delhi.

Speaking about the launch of the new [FibroScan](#) service, Dr Shubham Sogani, CEO of House of Diagnostics, said, "The advanced FibroScan technology is a quick, safe and painless way to screen for liver stiffness. It is a cost-effective tool, which aids in early intervention and monitoring of disease progression. At HOD, we are committed to regularly introducing advanced testing solutions for our patients. The addition of FibroScan is a step towards providing multiple modalities for the ease of our patients. Our focus is always on giving the best CARE to our patients."

Liver cirrhosis and other chronic liver disease (CLD) are one of the most significant public health concerns globally. The major causes of CLD include nonalcoholic fatty liver disease (NAFLD) and its more severe form, nonalcoholic steatohepatitis (NASH), alcohol and viral hepatitis.

Apart from FibroScan, HOD also offers a comprehensive range of diagnostic and pathology tests, including advanced 3T MRI Scan, Low-dose CT scan, Echocardiography, Mammography, Uroflowmetry, Blood Tests and Health Packages suitable to all age groups, under one roof.

"The introduction of this new technology fortifies our commitment to innovation and excellence in the healthcare sector. We constantly strive to stay at the forefront of technological advancements, and this latest FibroScan addition underscores our dedication in providing cutting-edge solutions to our valued customers. This state-of-the-art technology not only enhances the efficiency of our operations but also elevates the overall user experience. We believe in staying ahead of the curve to meet the evolving needs of our patients and to set new industry standards," said **Labham Sogani, CTO, House of Diagnostics**.

[HOD Karkardooma](#) is our integrated diagnostic and pathology centre, where strict quality systems are followed to ensure compliance with standard processes. Safe diagnostic and collection practices are ensured for quick, reliable, accurate and consistent results for all patients.

About HOD

HOD is a young, dynamic and rapidly growing integrated medical diagnostic service provider, making a positive impact in India's healthcare sector. With a vision to be a pan-India healthcare player, the company is currently managing its operations in Delhi-NCR, with plans to expand rapidly in other parts of the country. HOD has 10 Integrated Service Centres providing radiology, pathology and nuclear medicine services, and a footprint spanning over 150+ blood collection centres across the national capital region. HOD is committed to service people with reliable and quality diagnostic and pathology services using the latest state-of-the-art technology supported by strict internal and external quality assessments and controls.
