

Patient Name : Demo Patient Name
Age / Sex : 21 Y / M
Referred By : DEMO HOSPITAL
Centre : HOD Head Office

Lab No : Demo Visit No
Registration On : 21-Jan-25 15:25
Patient ID : UHID.DEMO.001

Dengue Serology [IgM & IgG]				Serum Sample
Accession No: DEMO_BARCODE		Collected On: 21-Jan-25 15:25	Received On: 21-Jan-25 19:24	Approved On: 21-Jan-25 21:06
Observation	Result	Unit	Biological Ref. Interval	Method
Dengue Serology [IgG]	0.05	Index Value	<1:Negative ≥1:Positive	CLIA
Dengue Serology [IgM]	0.12	Index Value	<1:Negative ≥1:Positive	CLIA

Advise: Please note that this is a screening test. Advised confirmation with PCR for Dengue.

Clinical Notes:

- 1) This test detects IgM & IgG antibodies to dengue virus in the specimen and should not be used as the sole criteria for the diagnosis of Dengue virus infection.
- 2) IgM antibodies are not detectable until 5 to 10 days in case of primary dengue infection and until 4 to 5 days in secondary infection after the onset of illness.
- 3) IgG antibodies appear after 14 days and persist for life in case of primary infection and rise within 1 to 2 days after the onset of symptoms in secondary infection
- 4) Serological cross-reactivity across the Flavivirus group(Dengue virus, St. Louis encephalitis, Japanese encephalitis, West Nile and yellow fever virus) is common.

Sample Type: Serum

Please correlate results clinically.

This is a Demo Signature
and the doctor's signature should appear here
