Interpretation of Results

Result in CU	Remarks
<20	Negative
20-39	Weak Positive
40-80	Moderate Positive
>80	Strong Positive

Test Interpretation: Antibodies to Scl-70 (DNA topoisomerase I) are detected in nearly 75% patients with Progressive Systemic Sclerosis (PSS). These antibodies can also be detected in 20-59% patients of connective tissue disorders and 13% patients with CREST syndrome. Patients of Scleroderma with Scl-70 antibody positivity are associated with diffuse cutaneous involvement, increased frequency of pulmonary fibrosis and high mortality.

Advise: Please correlate results clinically.
