Scrub Typhus IgM

Serum Sample

Accession No: DEMO_BARCODE Collected On: 14-Jan-25 10:20 Received On: 14-Jan-25 14:11 Approved On: 14-Jan-25 18:11

Observation	Result	Unit	Biological Ref. Interval	Method
Scrub Typhus IgM	Negative			Immunochromatography

Advise: Please correlate results clinically.

Interpretation:

Result	Remarks
Positive	Indicates presence of IgM antibodies against Orientia tsutsugamushi. Results are seen in acute Scrub typhus disease.
Negative	Indicates absence of IgM antibodies against Orientia tsutsugamushi

Note:

- **Positive results** are seen in acute Scrub typhus disease caused by Orientia tsutsugamushi.
- Negative results are seen in absence of Orientia tsutsugamushi infection. However, it does not rule out the disease.
- False positive results may be due to cross reactivity with Epstein-Barr virus, Brucella or Dengue Virus infections, in patients with high levels of heterophile antibodies or Rheumatoid factor.
- False negative reaction may be seen in immunosuppression or due to processing of sample collected early in the course of disease or low threshold of antibody. The test should be repeated on a new specimen obtained after two weeks.
- Use · To Assist in Diagnosis of a Patient Suffering from Acute Scrub Typhus Disease.
