Patient ID : UHID.DEMO.001

Scrub Typhus IgG

Serum Sample

Accession No: DEMO_BARCODE Collected On: 01-Jan-25 12:09 Received On: 01-Jan-25 15:00 Approved On: 01-Jan-25 17:44

Observation	Result	Unit	Biological Ref. Interval	Method
Scrub Typhus IgG	Negative			Immunochromatography

Advise: Please correlate results clinically.

Interpretation:

Result	Remarks
Positive	Indicates presence of IgG antibodies against Orientia tsutsugamushi.
Negative	Indicates absence of IgG antibodies against Orientia tsutsugamushi

Note:

- **Positive results** are seen in past/chronic Scrub typhus disease caused by Orientia tsutsugamushi.
- Negative results are seen in absence of Orientia tsutsugamushi infection. However, it does not rule out the disease.
- False positive results may be due to cross reactivity with Epstein-Barr virus, Brucella or Dengue Virus infections, in patients with high levels of heterophile antibodies or Rheumatoid factor.
- False negative reaction may be seen in immunosuppression or due to processing of sample collected early in the course of disease or low threshold of antibody. The test should be repeated on a new specimen obtained after two weeks.
- Use: To provisionally make a diagnosis of patient suffering from past/chronic Scrub Typhus Disease.
